

Live 360! Events

Conference Review

Follow along at:

<http://bit.ly/15u1FQ8> or <http://html5demo1.azurewebsites.net/>

Presented by Darek Tomyn
Darek.Tomyn@solvera.ca

Quick Summary

- ▶ Historically, was a [Visual Studio Live](#) annual event in Orlando
- ▶ 1st time “combined 4 events into 1”:
- ▶ [Visual Studio](#)
- ▶ [SharePoint](#)
- ▶ [SQL Server](#)
- ▶ [Cloud & Virtualization](#)
- ▶ Often there were 16 sessions happening at once!
- ▶ First and last days were “workshops”
- ▶ Microsoft technologies but not hosted by Microsoft

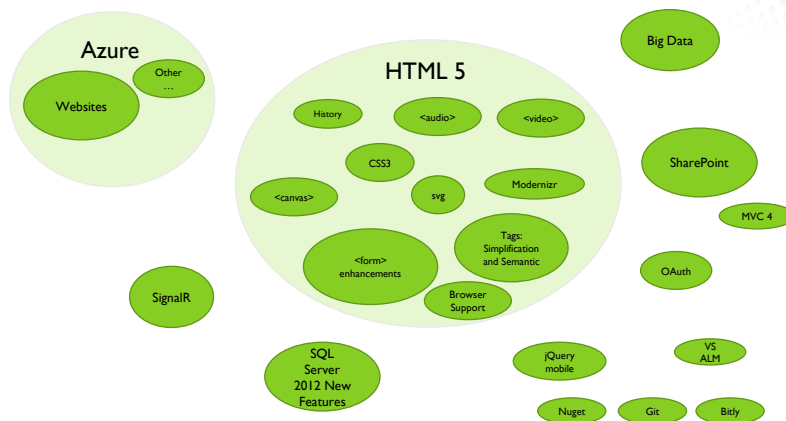

What my objectives were...

- ▶ **HTML 5...**
 - ▶ learn more including the “state” of it and how to get browsers to work with it
- ▶ **Azure...**
 - ▶ what “state” is it in? How to use, etc
- ▶ **Mobile...**
 - ▶ Windows phone... but looked like sessions were lacking
- ▶ **Any trends?**

2

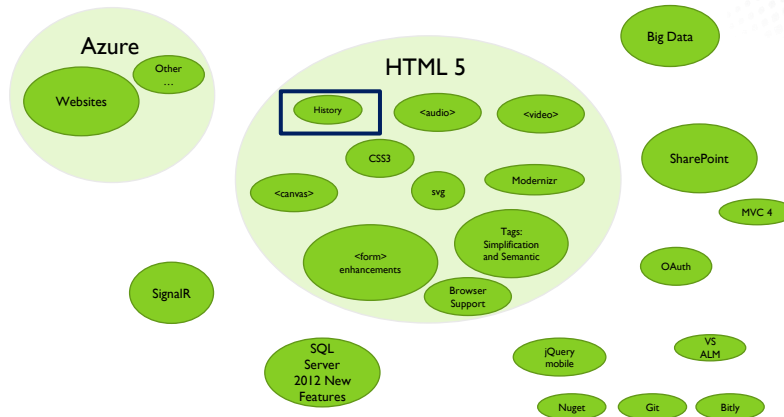

What I learnt

3

What I learnt

4

HTML 5 History

- ▶ Wee bit of history¹:
 - ▶ HTML (1991), HTML2 (1994), HTML3 (1995), HTML3.2 & 4 (1997), XHTML1 (2000), XHTML 1.1 (2001)
- ▶ W3C wanted XHTML 2... but was very strict standard
- ▶ Browser group formed **WHATWG**² and created HTML5
- ▶ W3C's XHTML 2 ultimately died on July 2, 2009
- ▶ WHATWG gave W3C permission to publish HTML 5... so really there are 2 specifications out there

5

HTML 5 History

- ▶ **Apple's affect:**
 - ▶ [“The world is moving to HTML 5”](#) - Steve Jobs
 - ▶ [iDevices have no support for Flash](#)

- ▶ **Logo**

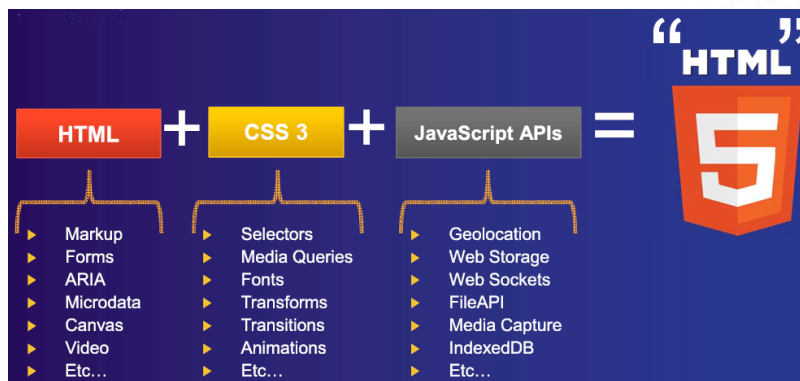

- ▶ **Marketing material**

6

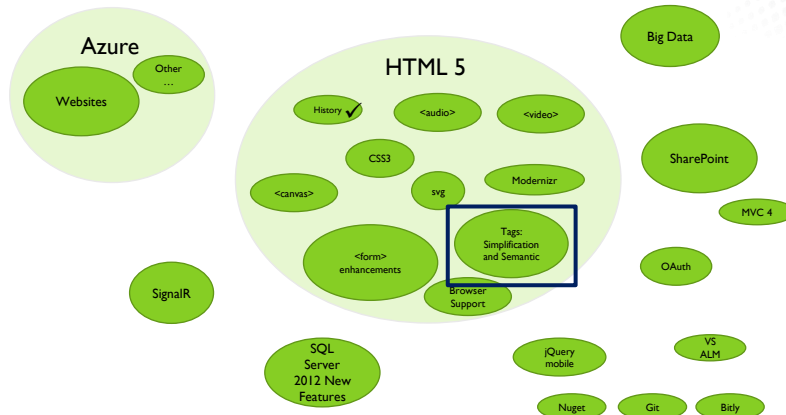

HTML 5 - What is it?

- ▶ **What is it? HTML + CSS3 + JavaScript APIs**

7

What I learnt

8

HTML 5 - Simplification

```
<!DOCTYPE html>
```

```
<html lang="en">
```

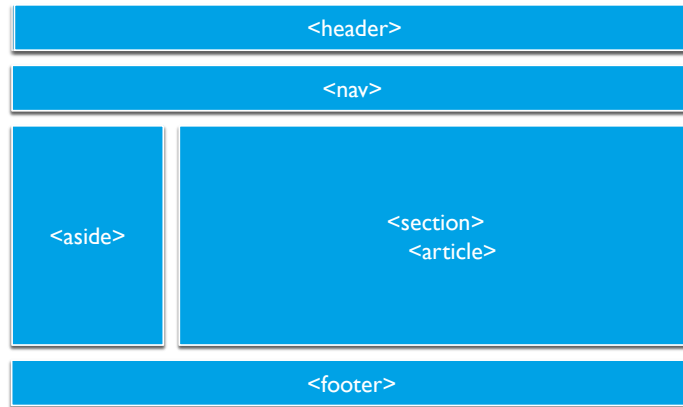

```
<meta charset="utf-8">
```

Some others:

- ▶ The type attribute is no longer required on <style> and <script> tags
- ▶ Elements that are by nature self-closing no longer need a "/"
 - ▶ img
 - ▶ br

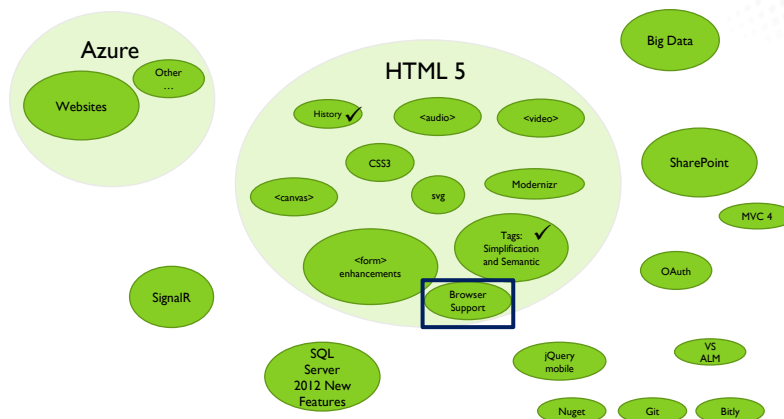

9

HTML 5 - New Tags

10

What I learnt

11

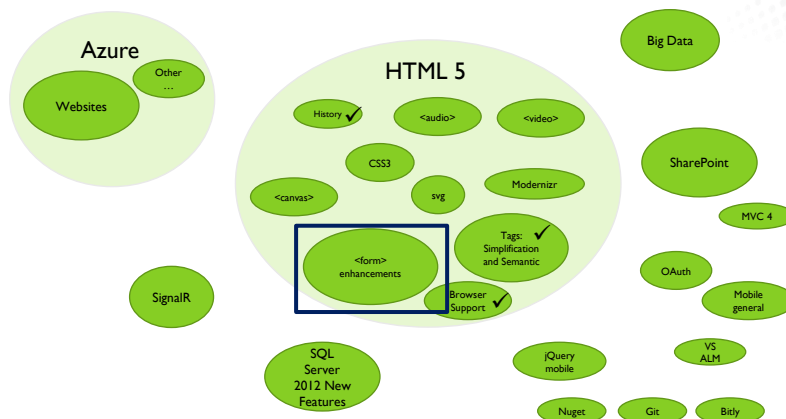

HTML 5 - Browser Support

- ▶ Spec moves through:
 - ▶ 1st Published Working Draft -> Working Draft -> Last Call -> Candidate Recommendation -> Recommendation
- ▶ IE goal is CR and up ... as a result, they “score” much lower... but are getting better
 - ▶ One easy option is [Google Chrome Frame](#) for <=8¹
- ▶ Don't “sniff” for browsers... test for features
- ▶ [Html5test.com](#), [Canluse.com](#), and lots of others
- ▶ Adoption strategies: lowest common denominator, polyfill² enriched
- ▶ DEMO 1 - 3
 - ▶ <http://html5demo1.azurewebsites.net/Index.html>

12

What I learnt

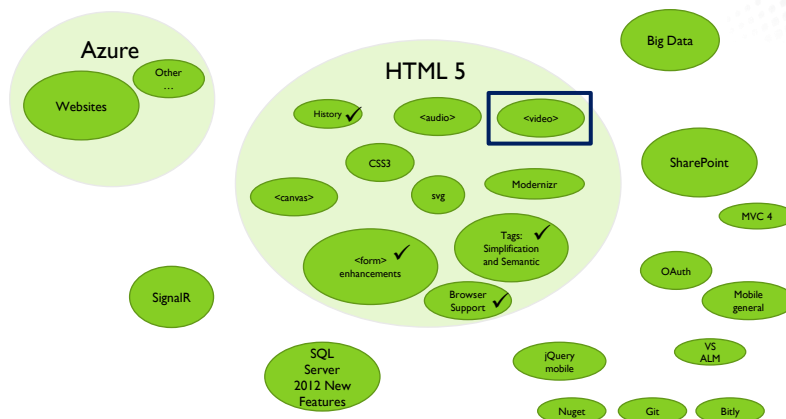

13

HTML 5 Form Enhancements

- ▶ **<input type=**
 - ▶ Email, url, search, number, date, time, color, etc
- ▶ **New attributes**
 - ▶ Placeholder, autofocus
- ▶ **Contenteditable**
- ▶ **Remember sites mentioned previously:**
Html5test.com, canluse.com
- ▶ **Demo 4**
 - ▶ <http://html5demo1.azurewebsites.net/Demo04-NewInputTypes.html>

14

What I learnt

15

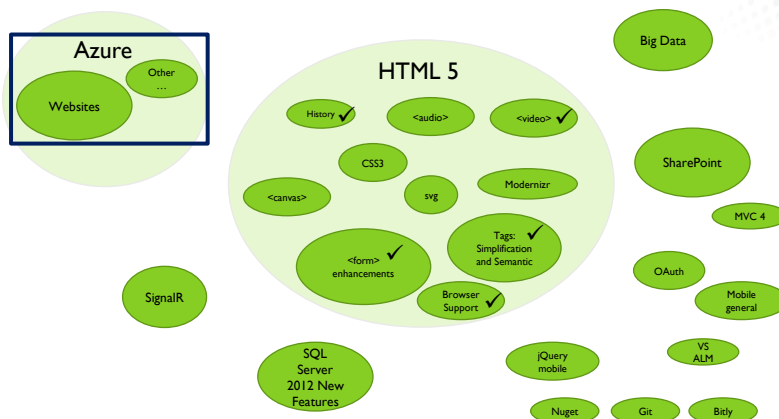

HTML 5 MultiMedia Enhancements

- ▶ New “audio” and “video” tags
- ▶ Demo 5
 - ▶ <http://html5demo1.azurewebsites.net/Demo05-Multimedia.html>

16

What I learnt

17

Azure

► What is it?

- cloud computing is really doing just-in-time provisioning and scaling of services, software and solutions delivered as a service on a pool of hardware
- On demand provisioning
- scaling resources... example “tonight I need 10,000 nodes for an hour until batch is done”
- abstraction over resources

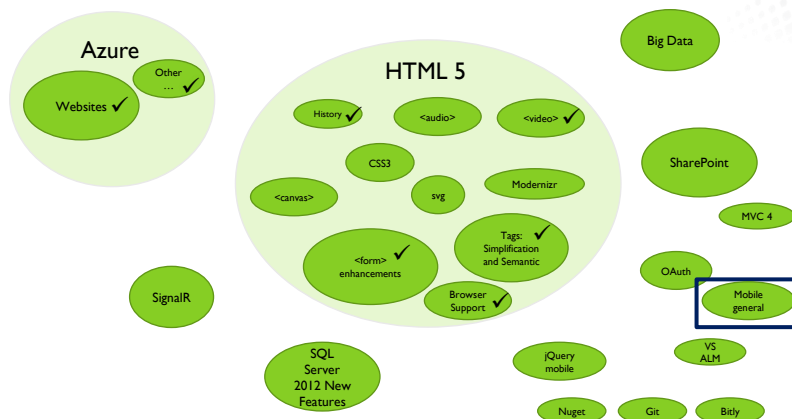

► Demo 6

- <https://manage.windowsazure.com>

18

What I learnt

19

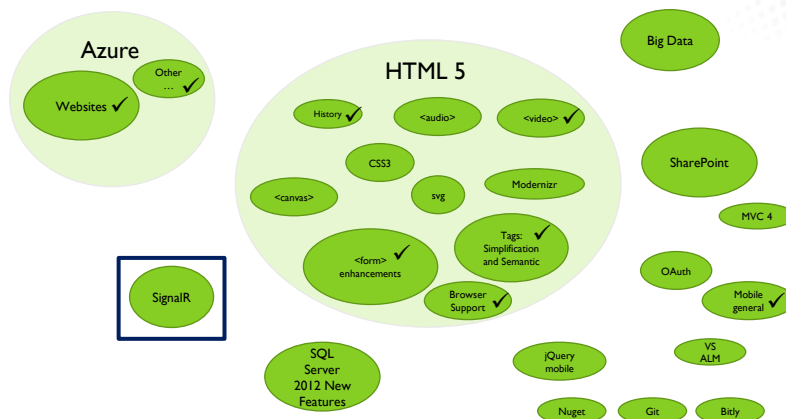

Mobile

- ▶ Concentration on HTML5 including CSS3 for formatting with mobile in mind
- ▶ 3 good takeaways
 - ▶ JSON for serialized data for smaller payload
 - ▶ [Opera mobile emulator](#)
 - ▶ By default, add the below “[viewport](#)” to all web pages:
 - ▶ `<meta name="viewport" content="width=device-width, user-scalable=no">`
- ▶ Demo 7
 - ▶ [Opera mobile emulator](#)
 - ▶ Page with and without meta tag

20

What I learnt

21

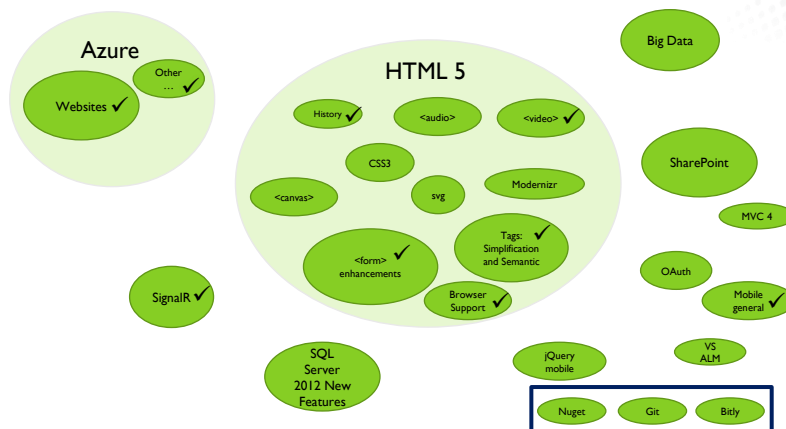

Trends - SignalR

- ▶ Makes real-time HTTP so easy it seems like “magic”¹
- ▶ An open source series of libraries that provide an abstraction around persistent HTTP connections²
- ▶ Demo 8
 - ▶ [Start up demo site on Azure](#)
 - ▶ 2 different demos here:
 - ▶ [HitCounter](#)
 - ▶ [Chat](#)

22

What I learnt

23

Other observations

- ▶ Nuget
 - ▶ Visual Studio add-in to import in external resources easily
- ▶ Git
 - ▶ Cvs -> svn -> git
- ▶ Bit.ly
 - ▶ Less and less people using tinyurl.com
- ▶ “Big data”
 - ▶ still in infancy (IMO)
